Meal & Break Push Notifications	3

# New Features & Improvements | Mobile

## Late Clock In/Out Push Notifications

WebClock managers with the **Edit Employee Profile** permission can now opt to receive push notifications when an employee has failed to clock in or out 15 minutes past his/her scheduled start and/or end time. By tapping the notification, users will be directed to the Roster Report area of the app.

*Please note that administrators will be able to configure when notifications are delivered in a future Release.*

## Meal & Break Push Notifications

WebClock managers with the **Edit Employee Profile** permission can also opt to receive push notifications when an employee has failed to clock out 15 minutes after they become eligible for a meal or break.
