LOGBOOK RELEASE 4.0.51.1

Released 07.07.2016

Table of Contents

New Features & Improvements | Web

Copying Task List Templates

Improvements have been made to copying Task List templates so that store assignments are no longer being copied as well.
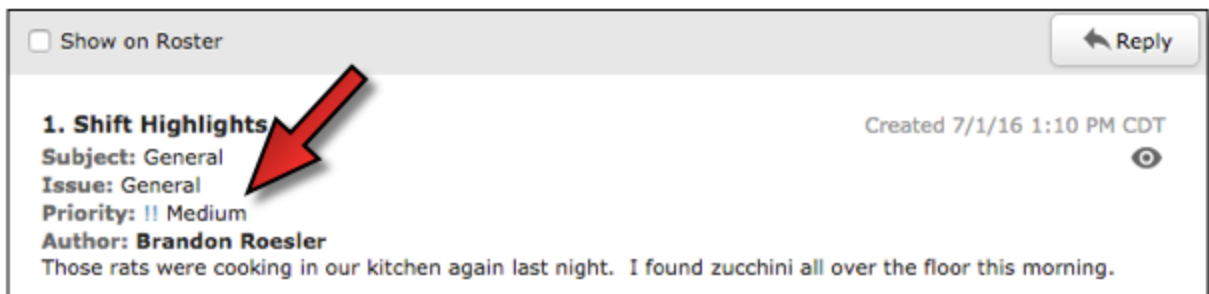

Searching Store Logs

The terminology has been updated to differentiate between searching Daily Log entries and Staff Journal entries within the Store Logs. When users are searching Daily Log entries, the Employee dropdown has been updated to say "Author." The dropdown when searching Staff Journal entries will still be labeled as "Employee."

Store Logs Priority Label

It is now easier to view the priority of a Store Log entry! A Priority field has been added to each entry when viewing in the pane on the right side of the screen.

New Features & Improvements | Mobile

Default Precision Values

When a precision value is not specified for a Calculated Control at the ASC level, the default maximum on mobile devices will be 4.
