New Features & Improvements | Web

ASC: Additional Columns Added to the Task List Completion Report

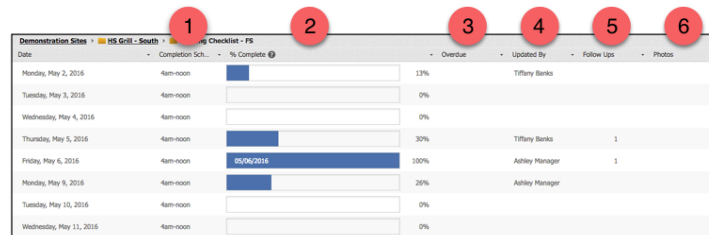

Above Store Console users now have more insight into the progress of their Task Lists at each of their stores with the Task List Completion Report.

Clicking on a store will take the user to the second level of the report, and display the progress for each Task within the list for that particular location.

Users can select a specific Task to view the Completion Schedule (1), its progress for each day (2), whether or not it was "overdue" (3), who updated it last (4), and whether or not there were any Follow Ups (5) or photos (6) added to it.

Logbook Report Updated for Internationalization

Several areas, such as Date/Time, and various text fields, have been updated throughout the Logbook Report to meet Internationalization standards.

Inactive and Unassigned Stores and Task Lists

Stores with an Inactive status, or that are unassigned in the ASC hierarchy, will no longer display in reports with a 0% Completion rate for Task Lists.
