New Features & Improvements | Web

Staff Journal Viewed Entries	2
Overdue Task List Notifications	3
Daily Log and Staff Journal Entry Notifications	3
Deleting Task List Rows	4

New Features & Improvements | Mobile

Calendar Picker Removed from Follow Up Tab

Because the Calendar Picker icon is only intended for the Task List tab, it has been removed from the Follow Up tab.

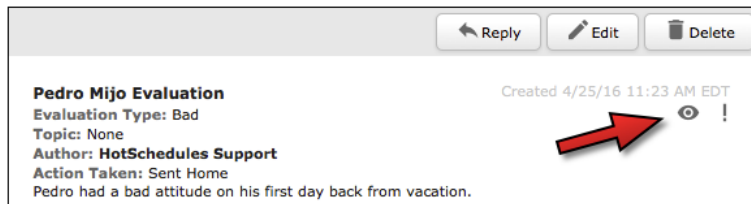

Task List Improvements

Performance updates have been made to loading and completing Task Lists on iPads that improve lag times when entering data into controls.

New Features & Improvements | Web

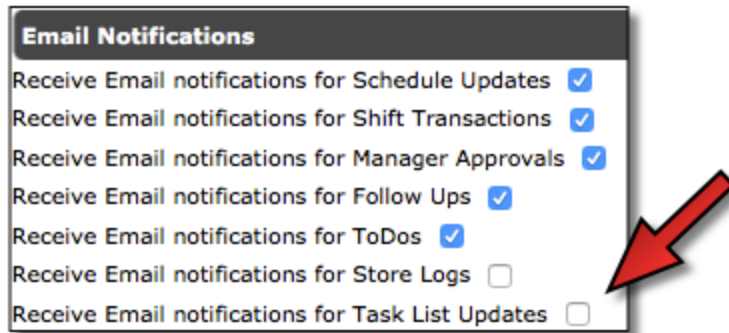

Staff Journal Viewed Entries

Users can now click an Eye icon to view who has read entries in the Staff Journal like they can for the Daily Log.

Overdue Task List Notifications

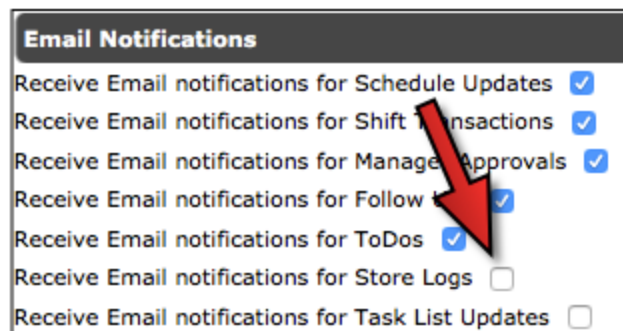

Managers with the **Task Lists** and **Edit Employee Profile** permissions now have the option of receiving a an email when a Task List is not completed by its Scheduled Time. The preference can be found in the Preferences sub-tab of the Settings tab, and it is unchecked by default. In addition to the email, managers will automatically receive a HotSchedules message when a Task List is not completed by its Scheduled Time.

Furthermore, when this box is checked, users will receive an email and HotSchedules message any time a Task List is completed with a Control outside of the designated limits. For example, if a Task List is completed with a Temperature Control of 112 degrees when the acceptable range is 130-132, an email will be sent. Please note that regardless of the users' preferences, they will still receive a HotSchedules message.

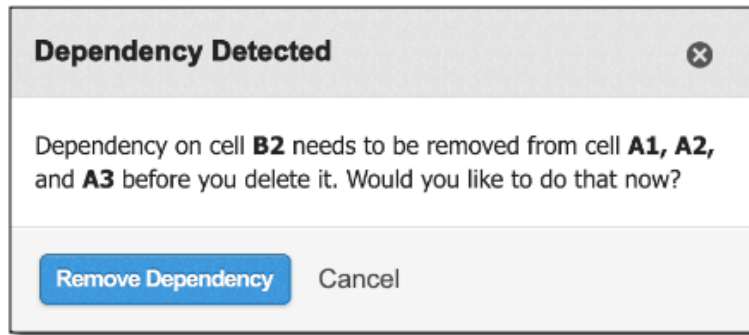

Daily Log and Staff Journal Entry Notifications

Users with the **Daily Log** and/or the **Staff Journal** permissions now have the option of receiving an email any time an entry, or reply to an entry is made. Regardless of the preference, however, users will still receive a HotSchedules message with each entry/reply.

Deleting Task List Rows

When users attempt to delete a row with a cell that a Calculated Control depends on, they will receive a warning.

Please note that there is still an issue when deleting columns with cells that Calculated Controls depend on, but it will be addressed in an upcoming Release.
