Calculated Controls and Parentheses	2
Introducing Store Logs	3

New Features & Improvements | Mobile

“Events Calendar” Renamed to “Events”

The menu item on Android has been renamed to be more consistent with the web platform.

Task List Improvements

Performance updates have improved the experience of loading and completing Task Lists on supported Android phones and tablets.

New Features & Improvements | Web

Service Formula Calculations Updated

Creating Calculations within Tasks has been simplified for the user. Previously, when creating Calculated Controls with a decimal, users were required to precede it with a zero. For example, 0.3. Now, .3 is also accepted.

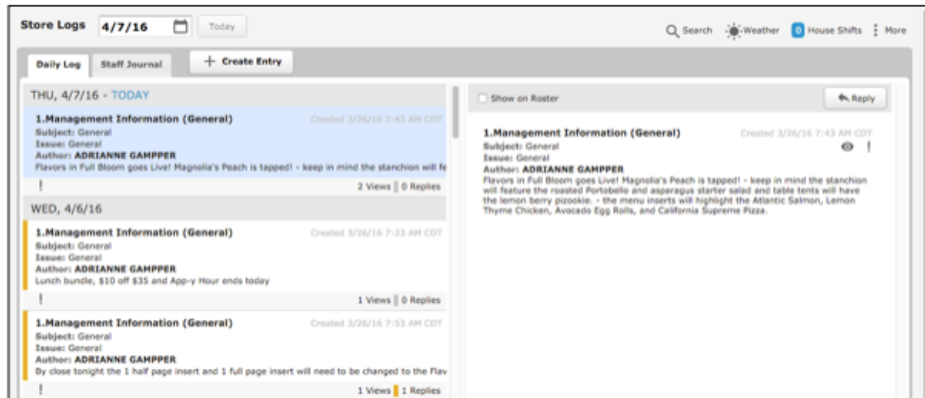

Furthermore, when users created a Calculated Control that references another cell without an operator, it would produce an error. For example, placing "A1" instead of "A1 + 0" in the C3 cell would produce the error. Now, it will default to the value of A1.

Calculated Controls and Parentheses

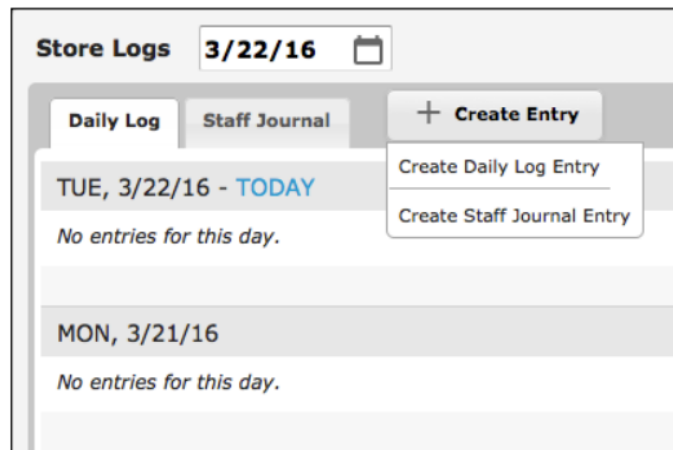

When creating Calculated Controls for Tasks, users are now able to use parentheses for more complex calculations. For example, a user can use the formula "(A3+B3)/(C3+D3)."

Introducing Store Logs

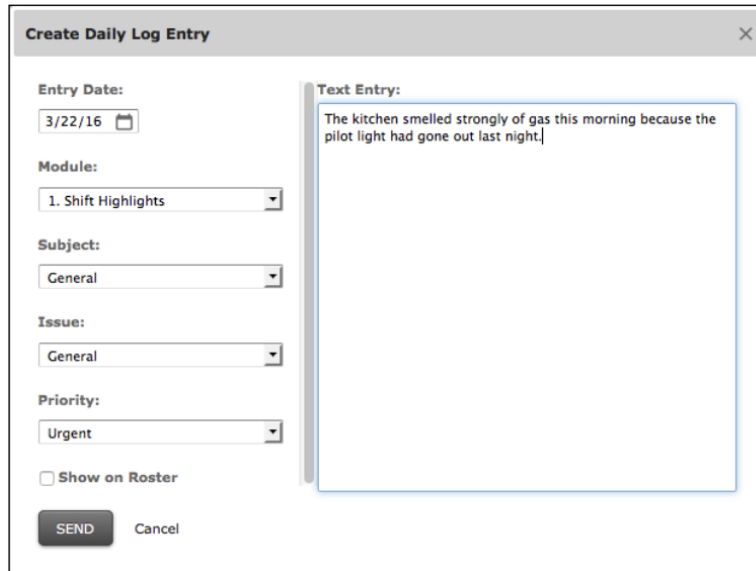

Composing entries in the Daily Log, and adding comments to the Staff Journal just got easier with the new Store Logs.

When a user clicks the Create Entry button, he/she is given the option to post to the Daily Log or the Staff Journal.

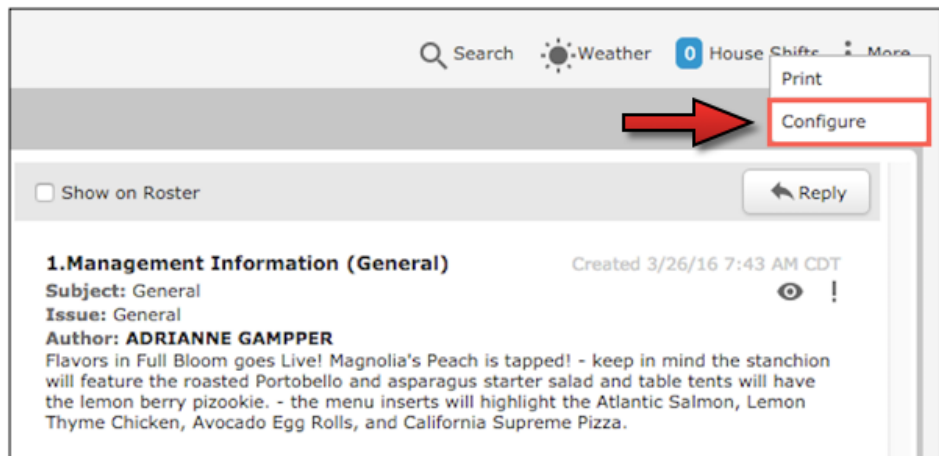

Once the pop-up appears, users can specify the Module, Subject, Issue, and Priority to attach to the message, and whether or not to post the message to the Roster.

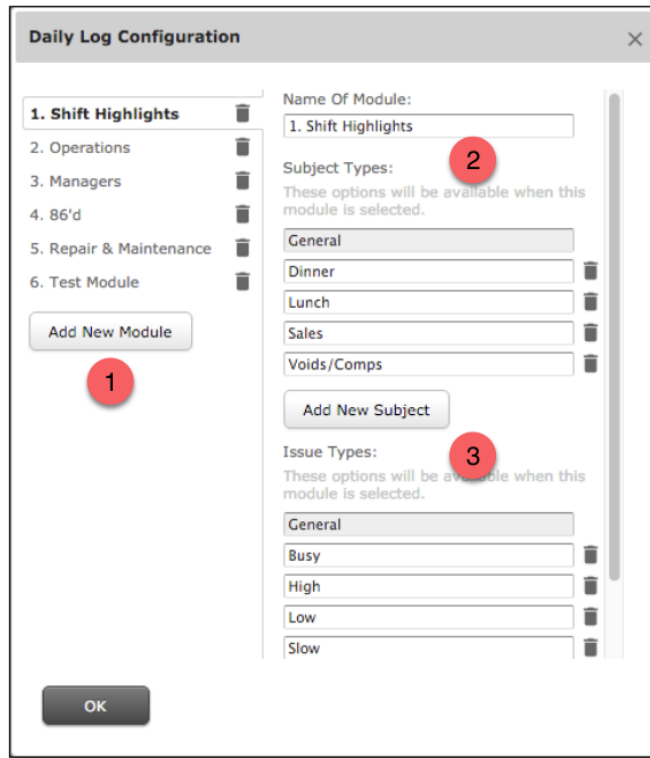

The screenshot shows a modal window titled "Create Daily Log Entry" with a close button (X) in the top right corner. On the left side, there are several form fields: "Entry Date" with a date picker set to 3/22/16; "Module" with a dropdown menu showing "1. Shift Highlights"; "Subject" with a dropdown menu showing "General"; "Issue" with a dropdown menu showing "General"; and "Priority" with a dropdown menu showing "Urgent". Below these fields is a checkbox labeled "Show on Roster" which is currently unchecked. At the bottom left of the modal are two buttons: "SEND" and "Cancel". On the right side of the modal is a large text area labeled "Text Entry" containing the text: "The kitchen smelled strongly of gas this morning because the pilot light had gone out last night."

If users want to configure what options their staff has when creating a new entry for the Daily Log, they can click the More button in the upper, right-hand corner of the screen to reveal the Configure modal.

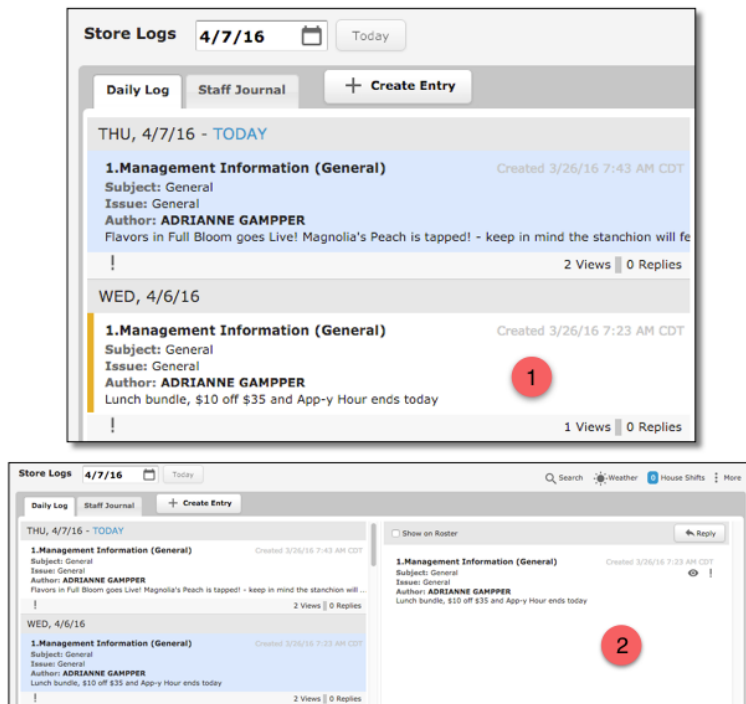

The screenshot shows a message interface. At the top, there is a navigation bar with "Search", "Weather", "0 House", "Shifts", and "More". A red arrow points to the "More" button, which has a dropdown menu open showing "Print" and "Configure". Below the navigation bar, there is a "Show on Roster" checkbox and a "Reply" button. The main content of the message is titled "1. Management Information (General)" and includes the following details: "Subject: General", "Issue: General", and "Author: ADRIANNE GAMPPER". The message body text reads: "Flavors in Full Bloom goes Live! Magnolia's Peach is tapped! - keep in mind the stanchion will feature the roasted Portobello and asparagus starter salad and table tents will have the lemon berry pizookie. - the menu inserts will highlight the Atlantic Salmon, Lemon Thyme Chicken, Avocado Egg Rolls, and California Supreme Pizza." The message is dated "Created 3/26/16 7:43 AM CDT".

From the Configure modal, users can add/remove Modules **(1)**, and edit Subjects **(2)** and Issue Types **(3)** for each one.

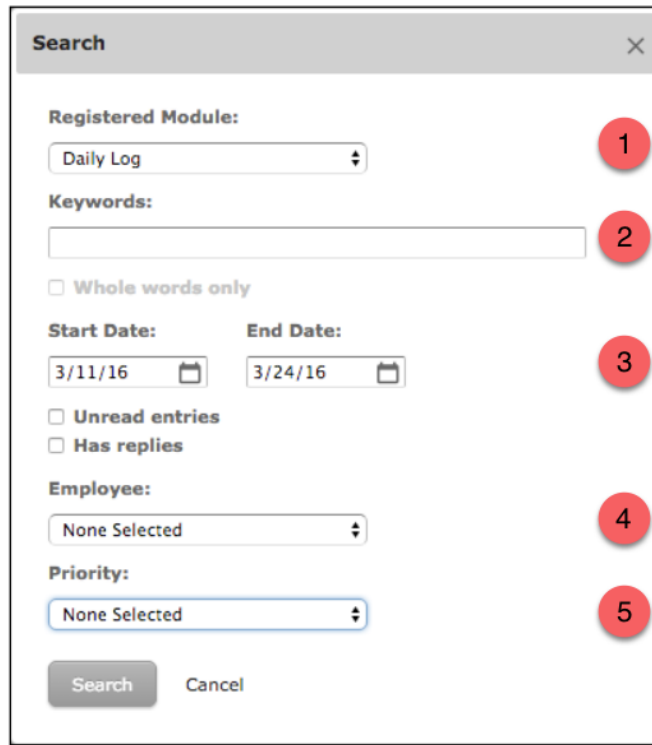

Entries and replies that have not been read will be marked with an orange line (1). To mark an entry as Read, a user can simply click the entry in the left pane to have it appear in the right pane (2).

When an entry is selected and displays in the pane on the right, users have the option to add it to reply to it. If the post is theirs, no one has already viewed it, and the post was made within 24 hours, the user can also edit the post or delete it. Clicking the eye icon will reveal who has viewed the post.

Users can easily search for past entries that have been made in the Daily Log or the Staff Journal by clicking the Search button. From there, they can filter their search by Registered Module (1), Keywords (2), the date range (3), a specific employee (4), or Priority (5).

The image shows a search dialog box titled "Search" with a close button (X) in the top right corner. The dialog contains several filter options, each with a red circular callout number to its right:

- Registered Module:** A dropdown menu showing "Daily Log" with a downward arrow. Callout number 1.
- Keywords:** A text input field. Callout number 2.
- Whole words only
- Start Date:** A date picker showing "3/11/16" with a calendar icon. Callout number 3.
- End Date:** A date picker showing "3/24/16" with a calendar icon. Callout number 3.
- Unread entries
- Has replies
- Employee:** A dropdown menu showing "None Selected" with a downward arrow. Callout number 4.
- Priority:** A dropdown menu showing "None Selected" with a downward arrow. Callout number 5.

At the bottom of the dialog are two buttons: "Search" and "Cancel".

The Weather and House Shifts widgets are now on the same line as the Search button. With a specific date selected, users are able to see what the weather was, as well as how many House Shifts were needed to be covered.
