Out-of-Tolerance Task List Summary Report Filter	2
Improvements to Copying Calculated Controls	2
Improvements to Task List Landing Page Column Spacing	3

New Features & Improvements | Web

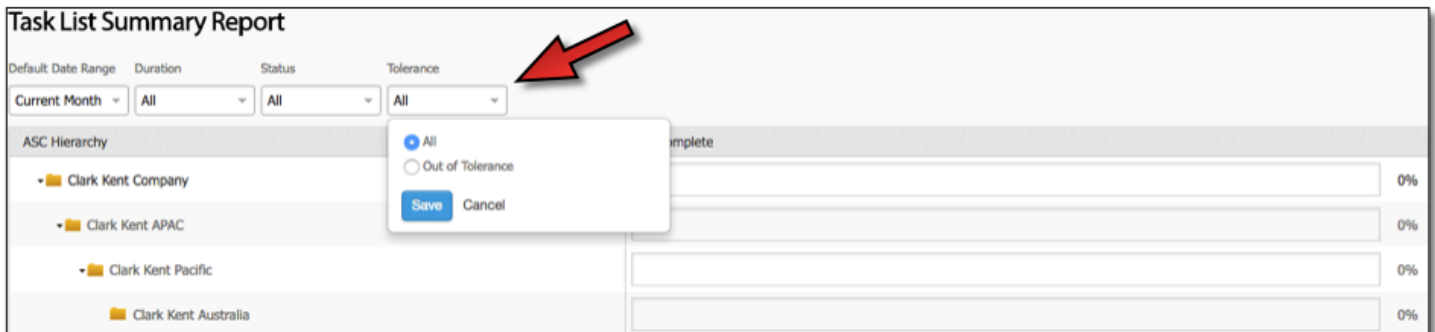

Updated Task List Completion Report Name

To avoid confusion, the Task List Completion Report has been renamed the "Task List Summary Report." The report still serves the same purpose, but now does so with a new name.

Out-of-Tolerance Task List Summary Report Filter

The 4.0.51.2 Release introduced a filter on the Task List Summary report's lowest level that allows users to display individual Tasks that are out of tolerance. With this Release, the filter has been applied to the top two levels above, so Above Store users are now able to filter the report to display Stores and Task Lists that have Tasks that are out of tolerance.

Improvements to Copying Calculated Controls

Updates have been made to the Task List Canvas so that copying a column or a row with a Calculated Control acts more consistent with the intended copy functionality.

Improvements to Task List Landing Page Column Spacing

The column spacing on the Task List landing page in the ASC will now be determined by the content within each column as opposed to the size of the users' browsers to reduce excessive amounts of space for columns that don't contain long lines of information, and to limit truncated labels.
