New Features & Improvements | Web

Following Stores

Job Seekers now have the option to follow stores on the web and receive job notifications. Once logged in, a store is followed by clicking the **Follow** button on its profile.

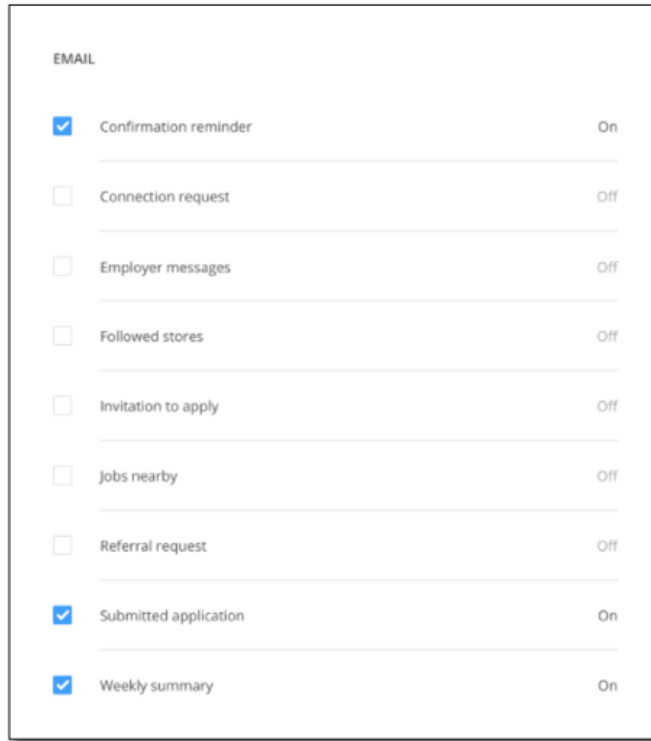

The button displays as green to indicate when a store is being followed. To stop following, users can simply click the button again.

New Settings

Users can now customize what emails they receive from the Notifications section of their Settings.

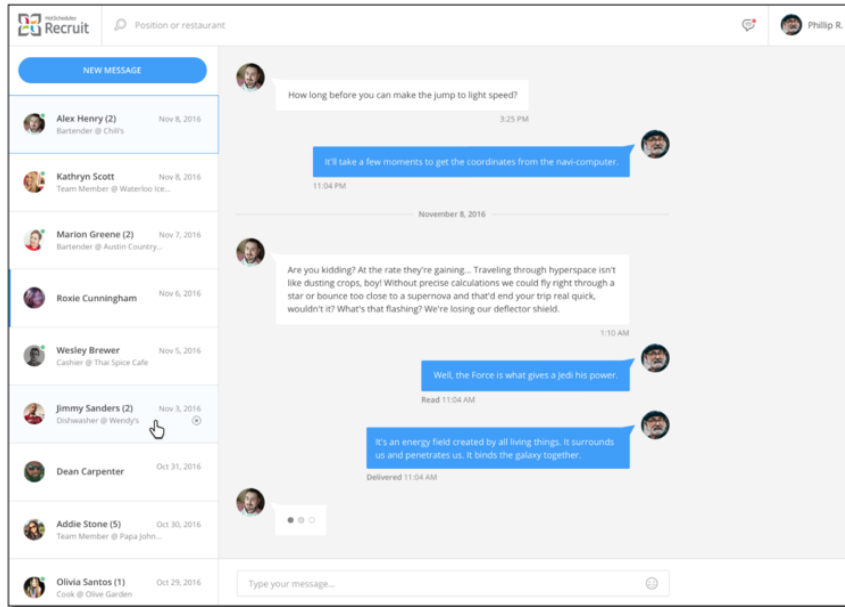

Visual Improvements to the Header

The header across the site has been updated to incorporate the new Messaging icon, along with a red indicator when there are unread messages. Logged-in users are able to view their personal avatar on the right, and can search for new positions or restaurants in the center.

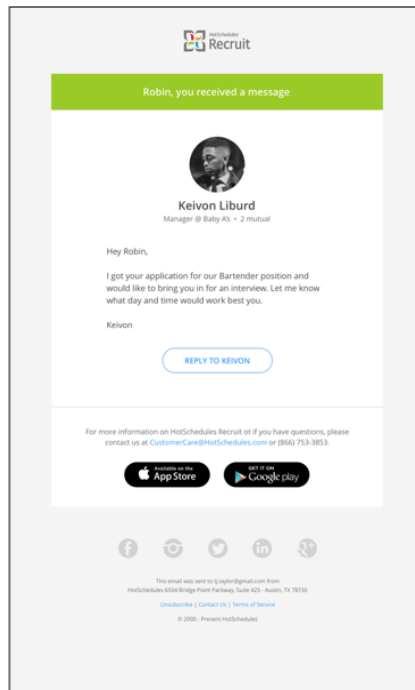

Messaging Redesign

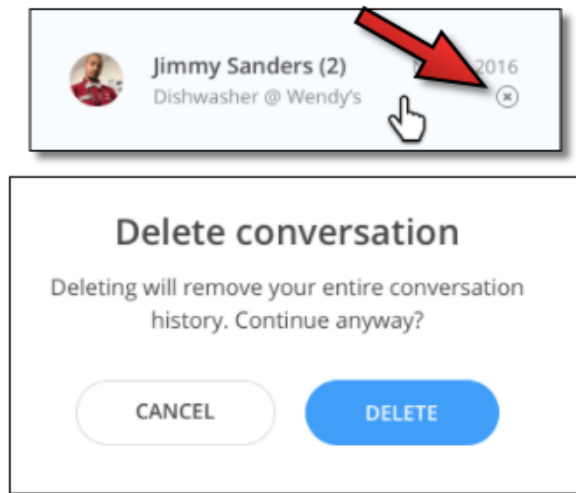

The ability to view messages and reply to them has been added to the web for Job Seekers. Selecting a message from the list on the left will display the conversation on the right. Selecting the reply section at the bottom of the conversations allows the user to compose a reply.

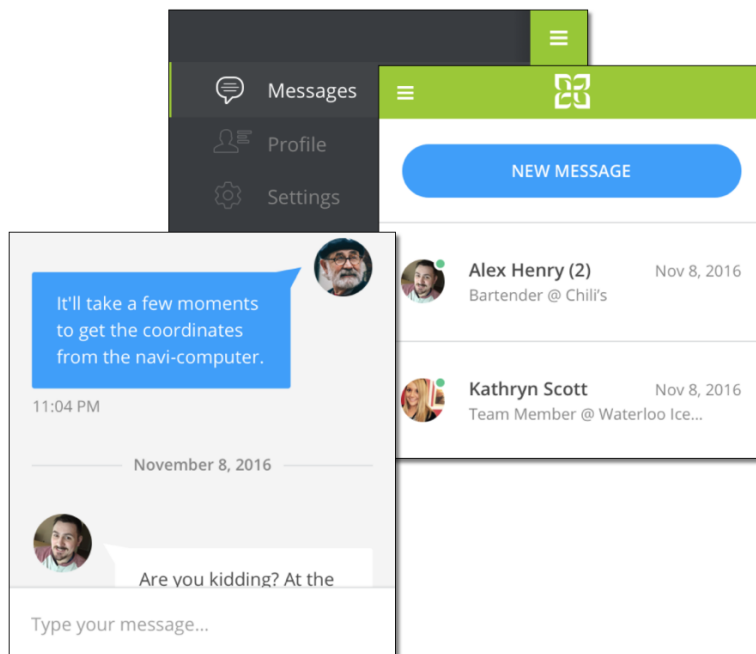

Users will continue to receive an email notification each time they receive a new message. Selecting the Reply option within the email will log them in on the web and display the new message.

Message threads can be deleted by hovering the mouse over them in the Message List to reveal a Delete icon. Once clicked, users will be presented with a Delete Conversation modal.

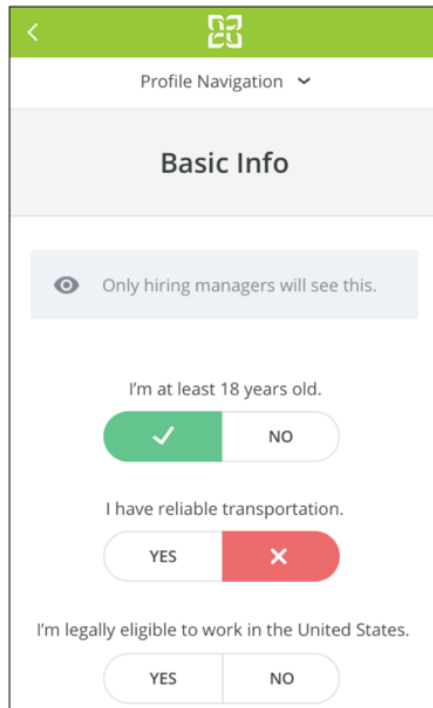

The new Messaging feature on the web is completely mobile friendly. Users can view and reply to messages from both Android and iOS mobile browsers.

Visual Improvements to Mobile Basic Info

Visual improvements have been made to the Basic Info questions when viewing them on a mobile browser.

Visual Improvements to Pagination and Job Details

Visual improvements have been made to the pagination when there are more than one page of job search results as well as the spacing between job content and the store logos.
