Total	9

MacromatiX Mobile (MxConnect)

Improved Night Banking Float Handling

 F28139

Night float count processing has been improved to ensure accurate cash balances and eliminate incorrect variances during night banking. When enabled, night float counts now align with authorized changeover counts, preventing unintended resets and improving consistency across cash management views.

Customer impact

- ✓ More accurate night banking results
- ✓ Reduced reconciliation errors
- ✓ Improved confidence in reported cash balances

Smarter AI Forecasting

 F27231

Forecasting now supports continuous AI forecast updates even after managers make adjustments. Organizations can control how adjustments are handled—ensuring forecasts continue to improve while preserving local expertise. Promotion and event impacts are applied consistently whenever forecasts refresh.

Customer impact

- ✓ More accurate and stable forecasts
- ✓ Reduced rework for managers and head office teams
- ✓ Better support for promotions, events, and AI driven planning

Enhanced Production Cooking Projections

 F27545

Production projections now provide earlier visibility into upcoming demand by extending the forecast window used for cooking calculations. This enables kitchens to prepare earlier during busy periods while maintaining existing food quality and expiry logic.

 **Customer impact**

- ✓ Earlier preparation during peak demand
- ✓ Reduced risk of stockouts or rushed cooking
- ✓ Greater confidence in production planning

 **Integrated Label Printing** **F28257**

MacromatiX now integrates directly with modern label printing solutions, allowing labels for production and food processes to be generated and printed automatically using standardized workflows.

 **Customer impact**

- ✓ Consistent, accurate label printing
- ✓ Reduced manual steps and errors
- ✓ Better alignment with modern kitchen operations

 **Mobile Financial & Operational Reporting** **F26282, F26281, F26287**

Key reports are now available in Mobile EBO, including Master Voucher, Petty Cash Summary, and Sales Summary with labor. These reports preserve existing calculations while optimizing layouts for mobile use.

 **Customer impact**

- ✓ Access critical reports anywhere
- ✓ Reduced reliance on legacy desktop reporting
- ✓ Faster financial and operational decision making

MacromatiX Desktop (MMS)

Improved Inventory Item Administration

F25200

Inventory item management has been enhanced to provide a more consistent experience. Item editability follows defined permissions, and items imported from external systems can be automatically assigned default stocktake groups.

Customer impact

- ✓ Reduced manual setup effort
- ✓ More consistent inventory configuration
- ✓ Improved data quality

Expanded Enterprise Ordering

F27257

Enterprise ordering workflows now support more flexible delivery schedules, improved order selection and management, and enhanced export reporting to support store level review.

Customer impact

- ✓ Reduced administrative effort
- ✓ Improved accuracy before orders are released
- ✓ Better visibility into enterprise level ordering activity

Stronger Enterprise Ordering Access Controls

F26592

Access controls are now enforced throughout the enterprise ordering lifecycle, ensuring users only view and manage orders for stores they are authorized to access.

Customer impact

- ✓ Improved data security
- ✓ Clear separation between franchisee and corporate orders
- ✓ Reduced risk of unauthorized changes

Vendor-Managed Schedule Protection

F27710

Vendor-sourced scheduled orders can be configured as read-only in the Store Calendar, preventing unintended edits while preserving flexibility for store-managed schedules.

Customer impact

- ✓ Fewer accidental schedule changes
- ✓ Clear ownership between vendors and stores
- ✓ Improved reliability of delivery planning

Enhanced Cost Reporting

F27903

Cost reporting has been extended to include additional cost categories, providing a more complete view of store cost performance while preserving existing calculations.

Customer impact

- ✓ More comprehensive cost visibility
- ✓ Improved margin analysis
- ✓ Better reporting performance

Inventory & Analytics Alignment

Inventory exports to analytics platforms can now align more closely with physical count activity, improving consistency between operational reports and analytics outputs.

Customer impact

- ✓ More consistent inventory and cost reporting
- ✓ Better alignment across systems
- ✓ Increased confidence in analytics data

Quality & Stability Improvements

Customer impact

This release includes numerous fixes and refinements across mobile usability, reporting accuracy, inventory reconciliation, POS integrations, and cash management—delivering a more stable and reliable experience across the platform.

CloudLink Highlights

Integrations & Platform Enhancements

F27579

POS, Cash Management, and Waste Tracking Improvements

Integrations have been enhanced to capture a broader range of transaction details from supported POS platforms, including refunds, voids, non-sales items, waste, and cash drawer activity.

Customer impact

- ✓ Improved sales and cash accuracy
- ✓ Better waste visibility
- ✓ More reliable end-of-day processing

New and Improved POS Integrations

 **F28525, F28645, F27902, F28500**

Additional cloud-based POS integrations and enhancements improve cashier shift handling and drawer reconciliation, even when transaction events arrive out of sequence.

Customer impact

- ✓ Accurate cashier reconciliation
- ✓ Fewer discrepancies during cash up
- ✓ Improved reliability during POS transitions

LiveLink Highlights

Standardized Label Printing Formats

 **F28106**

Label printing now supports standardized formats aligned with brand and regional standards, improving clarity and consistency across stores.

Customer impact

- ✓ Improved label readability
- ✓ Reduced labelling errors
- ✓ Better compliance with operational standards

Server Manager Highlights

Payroll & Workforce Integration Enhancements

 **F27873, F28425**

Workforce and payroll exports have been enhanced to support more flexible employee identification and grouping models.

 **Customer impact**

- ✓ Fewer payroll reconciliation issues
- ✓ Better support for multi-store labor models
- ✓ Improved integration reliability
