2026.4 Release Wrap 11

Introduction

The 2026.4 MacromatiX release brings self-service tools, faster ordering and richer reporting to store teams, while strengthening integrations, financial controls and platform scale. This release focuses on reducing everyday support effort, keeping more of the store routine in Mobile, and preparing MacromatiX for larger, multi-level organizations.

Purpose

This document is a Release **Summary** of features and benefits of the 2026.4 release highlights.

Next to each highlight, look for the feature reference from the full 2026.4 Release **Notes** for more detailed information, or please contact your MX CSM or Support Team for assistance.

Release Highlights

The 2026.4 release includes substantive changes to improve the MacromatiX user experience. This release delivers meaningful improvements that help teams manage cash, order and produce with more confidence and less manual effort.

- ★ Self-service cash corrections that **reduce support requests**
- ★ **Standard Order Guides** for faster, more consistent ordering in Mobile
- ★ Support for organization hierarchies with **more than four levels**
- ★ **More of the weekly routine** in Mobile, from cash deposits to one-click report exports
- ★ **Smarter ordering controls** with delivery-day rules and dual filters
- ★ **Clearer production guidance** with batch rounding and one label per cook batch
- ★ **More complete COGS and inventory movement** reporting with Production BOM activity
- ★ **Stronger financial controls** and automated period-close handling
- ★ **Faster onboarding** and wider integrations with historical sales processing, SAP, BYTE POS and Edify
- ★ 64 defects resolved

Reporting	1	
Workforce		
Total	**10**	**2**

Back-End Applications	
CloudLink	4
LiveLink	
RDS	1
Server Manager	3
Total	**8**

Platform Highlights

Support for Hierarchies Beyond Four Levels

F29827, F30383, F30381, F30382

MacromatiX can now reflect organization structures with more than four levels, including hierarchy data received from CUP, users assigned to above-store units, Unit Names of up to 128 characters, and multi-level views across Server Manager tasks, MxConnect, MMS and reports.

Customer impact

- ✓ Mirror your real organization structure
- ✓ Hierarchy changes managed in CUP stay consistent
- ✓ Tasks, pages and reports that work at every level

MacromatiX Mobile (MxConnect)

Self-Service Cash Corrections

F30068

Store managers with the new permissions can view individual skim entries, correct skim amounts, and reverse deposits and dispatches directly in Mobile. Every change recalculates totals and is recorded in an audit trail.

Customer impact

- ✓ Fewer support requests and database scripts
- ✓ Faster, more accurate cash reconciliation
- ✓ Full audit traceability for every correction

More of the Weekly Routine in Mobile

F30192, F29997

A new weekly Cash Deposit page lets managers review, add, update and delete deposits by fiscal week, and a new Export All to Excel button creates one workbook containing every weekly report for a store and week.

Customer impact

- ✓ Deposit review and correction in one platform
- ✓ Every weekly report in a single workbook
- ✓ Fewer repetitive steps each week

Standard Order Guides

F30181

Stores can create curated guides of their most frequently ordered items and select one when placing ad hoc or scheduled orders. The guide used is stored with the order and shown in Order History.

Customer impact

- ✓ Faster, more intuitive order creation
- ✓ More consistent ordering between stores
- ✓ Less searching through long item catalogs

Smarter Ordering Controls

F29517, F30040

Vendor items can be limited by delivery day and date range, and Item Group and Order Category filters can now be used together so each manager sees the items that matter to them.

Customer impact

- ✓ Orders that match supplier delivery schedules
- ✓ Managers focus on the items they own
- ✓ Quicker navigation of long item lists

Clearer Production Guidance

F30400, F30470

Suggested cook quantities now follow each item's rounding precision, with rolling adjustments that keep the day on target, and a new option prints one label per cook batch.

Customer impact

- ✓ Quantities in practical batch increments
- ✓ Less label waste in busy trading periods
- ✓ Clearer guidance for store teams

More Complete COGS and Inventory Movement Reporting

F28281

The Mobile Inventory Movement and COGS reports now include Production BOM Make and BOM Usage, with new selectable columns and updated usage and variance calculations.

Customer impact

- ✓ A fuller view of production-related movement
- ✓ More accurate actual usage and variance
- ✓ Report views that show the columns you choose

Flexible Sign-In for Restricted Environments

F30253

A configurable 2FA grace period and an automated BypassIDM setting maintained through the employee import reduce repeated verification prompts for store teams who cannot always carry a mobile device.

Customer impact

- ✓ Smoother logins for store teams
- ✓ Settings maintained centrally, not user by user
- ✓ Authentication aligned with security requirements

MacromatiX Desktop (MMS)

Faster Suggest-Ordering Setup

F29646

UPT, UPTAutoCalc and AutoOrderType can now be maintained through the Entity Item Import, with configurable defaults applied automatically when new stores are created.

Customer impact

- ✓ Quicker onboarding of new stores
- ✓ Consistent settings across stores
- ✓ Less manual item-by-item configuration

Petty Cash Permissions and Audit Trail

F26906

Separate edit and delete permissions now apply to petty cash transactions on both MMS and Mobile, with detailed audit logging of every change.

Customer impact

- ✓ Greater confidence in petty cash accuracy
- ✓ Access matched to each role
- ✓ A complete transaction history for audit

CloudLink Highlights

Historical Sales Processing Service

F30371, F30317, F30316, F30318, F30319

A new CloudLink service lets teams request, monitor and control the processing of historical sales into the Data Lake, a sales summary or full transaction detail, without competing with live store sales.

Customer impact

- ✓ Faster onboarding and reporting set-up
- ✓ History for year-over-year analysis and AI Forecasting
- ✓ Live sales traffic stays protected

SAP Integration

F30012

A new file-based integration to SAP ByDesign sends purchase orders, goods receipts and monthly inventory counts, with monitoring, retries and dated archiving for each process.

Customer impact

- ✓ Less manual data entry
- ✓ Consistent data between MacromatiX and SAP
- ✓ Processes that are easy to monitor

BYTE POS Integration Updates

F29475, F30337

The BYTE POS integration now uses the supported replacement fields, and an optional setting stores promotion codes and names separately for clearer discount reporting.

Customer impact

- ✓ Continued compatibility with the BYTE schema
- ✓ Richer discount reporting
- ✓ No change for existing customers unless enabled

Server Manager Highlights

Period Close Automation

US225232, F29799

New Server Manager tasks can automatically lock the previous fiscal period on a daily, weekly or monthly schedule, and create missing period closes so Raw Product Cost reports have what they need.

Customer impact

- ✓ Less manual work at period end
- ✓ More consistent period locking
- ✓ Configurable to suit each customer

Edify Forecast and Transfer Feedback

F29975

The forecast export to Edify now includes each store's total daily sales forecast, and a new export sends transfer receive and cancellation results back to Edify.

Customer impact

- ✓ Better coordination between hub and spoke kitchens
- ✓ Sales forecasts available for production planning
- ✓ Receive and shortage details shared automatically

RDS Highlights

Sales Book Data Retrieved from RDS

F29262

A new stored procedure retrieves BIR Sales Book data directly from the Reporting Data Store, including history no longer held in the operational database, with added SCD and PWD breakdown columns.

Customer impact

- ✓ Long-term history available on demand
- ✓ Support for compliance and audit readiness
- ✓ A leaner operational database

2026.4 Release Bug Fixes

This release includes 64 fixes and refinements across ordering and scheduled orders, banking and deposits, production, POS integrations, authentication, and reporting—delivering improved accuracy, usability, and overall system reliability. Behind the scenes, F30179 adds more dependable restarts after the nightly refresh, a per-customer refresh time, a third-party security update, upgraded messaging services and expanded logging.

2026.4 Release Wrap

The 2026.4 release continues MacromatiX's evolution toward a more self-service, integrated, and mobile-enabled platform. These enhancements put more control in the hands of store teams, reduce manual effort and support requests, and provide greater visibility across ordering, production, cash and reporting workflows.
